Weather App

Open source weather API: https://openweathermap.org/api
Registration for API key: https://home.openweathermap.org/users/sign_up

Create an app that allows user to get weather information.
Application should have input field where user will write name of the city. User should be able to choose between current weather information or 5-day weather forecast. Retrieved data should be rendered with images sunny/rainy/cloudy/snowy displaying each day high and low temperatures. User should be able to pin retrieved data. Pinned data should remain rendered on next search and have own 'refresh weather data' button.

Requirements
- Application should be written using React.
- Application state should be managed using redux state.
- API calls should be done using redux saga.
- Bootstrap 4
- Application source code should be stored in Git.
